

1. Final Homepage Cleanup (**LandingPage.tsx**)

We need to remove that last "Book a Discovery Call" button to keep the focus on **View Products**.

Instruction for Caffeine:

"In **LandingPage.tsx**, find the bottom blue section. **Delete** the button that says 'Book a Discovery Call'. Keep only the 'View Products' button."

2. Streamlining the Intake Form (**IntakeForm.tsx**)

To mimic the exact flow but skip the "Services" section, we modify the component that handles the **/get-started** route.

Instruction for Caffeine:

"Update the form component used for **/get-started** (likely **IntakeForm.tsx**).

1. **Remove the 'Services' tab/section** entirely from the multi-step flow.
2. Ensure the form now starts directly on the **Business Information** step.
3. The flow should now only be: **Business Info** $\rightarrow$ **Contact Info** $\rightarrow$ **Confirmation**.
4. Ensure it still captures the **intent** (audit/consultation) from the URL parameters so the lead is tagged correctly in the backend."
